Continuation of 5. does NOT place the application in condition for allowance because: Applicant argues that the claimed invention has direct tableting ability, excellent fast disintegrating tablets highly flowable, and the presence of water in the prior art references. These arguments have not been found persuasive in view of the scope of the claims being prosecuted. For the powders and granules being claimed, it does not matter, based on a review of the record, that water is present in the formulating process, merely that water not be present during tablet preparation. The prior art reference GB 14380175 teaches a dry granulation process Furthermore the language comprising permits the presence of the reference disintegrants which suggest suitable disintegration times. It is noted that the prior is suggestive of the use of disintegration agents to affect the rate of disintegration. Hence the recited flowability based on angle of repose does not aid in patentably distinguishing over the cited references.
